# THE FEDERAL DEMOCRATIC REPUBLIC OF ETHIOPIA CENTRAL STATISTICAL AGENCY

# KEY FINDINGS ON THE 2015 URBAN EMPLOYMENT UNEMPLOYMENT SURVEY

#### 1. INTRODUCTION

Ethiopia being one of the African countries with relatively fast growing population coupled with developing economies, proper management and efficient utilization of its work force is essential. In this respect, the capacity of the economy in absorbing the labour force needs to be monitored regularly and appropriate employment policy should consequently be adopted. Thus, the level of employment and unemployment of the country is widely used as overall indicators in evaluating the current performance of the economy. The analysis of employment status is therefore essential both in reflecting the current employment situations and foreseeing future changes.

Labour force survey is one of the most important sources of data that provides information regarding the level of employment and unemployment as well as the potential labour force of the country. It serves as an input for the setup of the post 2015 Sustainable Development Goals (SDGs). Furthermore, it is also important to monitor and evaluate the second five years Growth and Transformation Plan (GTP II) of the country.

The 2015 Urban Employment Unemployment Survey (UEUS) is designed to provide data on employment and unemployment at national and regional urban levels. The survey follows a household approach and covers all urban areas of the country except the pastoralist areas of three zones of Afar and six zones of Somali regions. A total of 19,800 households were selected from 660 enumeration areas using systematic random sampling method of which 19,764 (99.8%) of the households are successfully covered by the survey.

This executive summary provides Key Indicators of Labour Market (KILM) such as activity rate / labour participation rate/, employment to population ratio, proportion of employed persons by occupation and industry, status in employment, employment in the informal sector, unemployment rate...etc. The comparison of the five survey results are presented in summary Table 1 and 2 at the end of this booklet. The detailed results of the March 2015 survey are also presented with brief descriptions together with statistical tables in the Statistical report. This booklet presents a summary of the main findings of the 2015 UEUS.

#### 2. EMPLOYMENT IN URBAN AREAS

## 2.1. Economically Active, Not Active and Activity Rate of Urban Population

The survey reveals that the total urban population of the country was estimated to be 16,598,199 of which 13,381,376 persons (80.6 percent) who were aged ten years and above in March 2015. The economically active population comprises employed and unemployed persons aged ten years and above. The size of economically active persons aged ten years and above based on the current status approach was 8,517,320 with activity rate of 63.7 percent. The economically not active persons who were neither engaged in productive activities nor available to furnish their labour due to homemaking activities, attending school, old age/pensioned, illness, too young to work...etc account 4,864,055 persons (36.3 percent). Among the population not active, the proportion of not active female is significantly higher (42.8 percent) than male (28.9 percent).

Economic activity rate or labour force participation rate is the percentage of the economically active population to the total population of economically active plus not active population. The activity rate at national urban level is about 63.7 percent. This implies about 64 persons are active to participate in the production of goods and services out of 100 persons age ten years and above. As shown in summary Table 1, The activity rate in March 2015 is the same that of April 2014 but greater than the rate observed during the last three years. Region wise, Benishangul-Gumuz, Gambella, Affar,SNNPR, Amhara ,Oromia in that order reported the activity rates above the national average. The lowest activity rate is observed in Somali Region (51.1 percent).

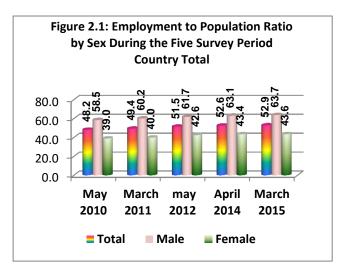

#### 2.2. Employment to Population Ratio

At country urban level, the size of employed population aged ten years and above was 7,083,094 persons in March 2015. As compared to the May 2010 (5,139,831 employed persons); the March 2015 figure has shown a significant increase by 1,943,263 persons (37.8 percent) during the last five years.

On the other hand, employment to population ratio provides information on the extent to which the population is engaged in productive activities. It is calculated as the percentage of total employed persons to the total population aged ten years and above. A high employment to population ratio implies large proportion of the population is employed, while low employment to population ratio reflects large share of the population is not involved in productive activities due to unemployment or out of the labour force.

According to March 2015 survey, the employment to population ratio of urban population was 52.9 percent. This means about 53.0 percent of the total urban population of the country aged ten years and above are employed. The employment to population ratio shows an increasing trend from the survey periods May 2010 to March 2015. The differential by sex also depict that the ratio of males (63.7 percent) is significantly higher than females (43.6 percent) (see figure 2.1).

With regard to regions, Benishangul-Gumuz region exhibits the highest employment to population ratio (67.9 percent), while Somali region demonstrates the lowest ratio (43.5 percent) in March 2015 (see Summary Table 1).

#### 2.3. Employment by Occupational Groups

The majorities of employed persons (45.9 percent) were Service, Shop, Market sales, Craft and related Trade workers out of 7,083,094 employed persons at country urban level. Those employed persons who were in the Elementary Occupations occupy the second position (20.3 percent). Professionals, Technical and Associate Professionals together constituted 15.9 percent. The lowest percentage share is observed for Plant Machine Operators and Assemblers 6.5 percent, Skilled Agricultural and Fishery workers accounted 5.5 percent, Clerks 3.6 percent and Legislators, Senior Officials and Managers share 2.3 percent of the total employed population in March 2015.

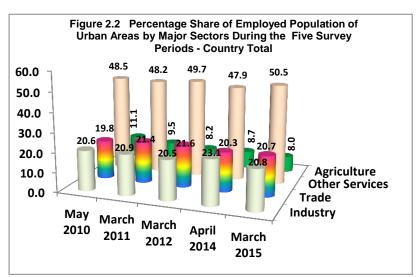

The percentage share of Service, Shop, Market and Sales, Craft and related workers including Technical and Associate Professionals as well as plant machine operators and Assemblers shows an increasing trend, while managers, Clerks, Skilled Agricultural and Fishery workers and Elementary Occupation illustrated a declining trend as compared to the May 2010 survey period (see Summary Table 2).

#### 2.4. Employment In Major Sectors of the Economy

The highest proportion about 50.5 percent of the employed persons are absorbed by the Service sectors, which include Electricity and Gas; Water Supply; Transportation; Accommodation; Information and Communication, Financial and Insurance Activities; Real Estate; Professional and Scientific and Administrative Support; Public Administration,

Defense, Compulsory Social Security, Education. Health and other activities; Hotel and Restaurant followed by Manufacturing, Mining, Quarrying and Construction Industry (20.8)percent). Wholesale and Retail Trades industrial divisions constituted (20.7)percent). Agriculture, Hunting, Forestry and Fishing sectors share only 8.0 percent in March 2015.

Periodical analysis by major sectors show that the percentage share of employment in urban areas has been slightly decreased in industrial sectors as compared to that of the service sectors from April 2014 to March 2015, while the employment share for Agriculture Forestry and Fishing

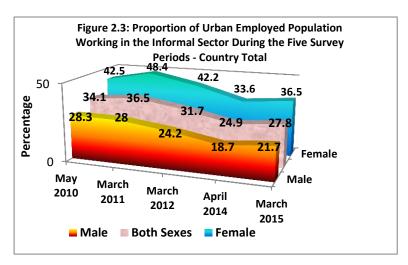

portrays ups and downs over the last five years (see Figure 2.2).

#### 2.5. Employment in the Informal Sector

According to March 2015 survey, 1,675,501 persons were engaged in the informal sector out of the total 6,020,229 urban employed population. This make up about one fourth of the total employment in urban areas. The proportion of employed persons who have been working in the informal sector has been getting ups and downs during the last five years i.e. from 34.1 percent in May 2010 reach to 27.8 percent in March2015. Females who work in this sector are significantly higher than males during the five survey periods (see Figure 2.3).

Summary Table 1 also shows that the highest proportion of employed persons who work in the informal sector found in Somali Region (42.3 Region percent). Affar (34.7)percent) and SNNP Region (34.5 percent). The lowest proportion is found in Addis Ababa Administration (13.0 percent) in March 2015. The percentage of employment in the informal sector in all regions shows fluctuations during the five survey periods.

Note: The aforementioned figure for urban employed population excludes subsistence farmers and domestic paid workers.

#### Mean Hours of Work per Week

Summary Table 2 illustrate that the mean hours worked per week was 43.0 hours in March 2015. The mean hours of work fluctuate from May 2010 to March 2015. Male hour of work is higher than female during the five survey periods.

#### 3. UNEMPLOYMENT IN URBAN AREAS

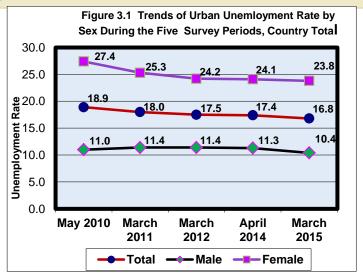

Unemployment is measured using the following three criteria: i) without work ii) available for work and iii) seeking work (ILO, 1990). However, this definition varies in the context of developing and developed countries. In the developed countries where the labour market is largely organized and labour absorption is adequate, unemployment is measured based on the standard definition of the seeking work criteria that is having taken active steps to search for work during specified reference period.

On the other hand, in developing countries like Ethiopia, where there is no strong labour market information, labour absorption is inadequate and where the labour force is predominantly self employed, the standard definition with its emphasis on seeking work criteria is somewhat restrictive and might not fully capture the prevailing employment situation. In order to measure unemployment depending on the existing labour market situations special provisions are made to relax the definitions. These are partially and completely relaxed definition of unemployment. Thus, the completely relaxed definition which measures unemployment in relation to" without work" and "availability for work" criterion is found to be more plausible in most developing countries.

The completely relaxed definition of unemployment, which best suits the Ethiopian labour market situations, includes persons who had no work but available for work. They may either seeking work or not seeking /discouraged job seekers/. Discouraged job seekers are those unemployed who want a job but not taking any active steps to search for work because they thought that job is not available in the labour market.

#### **Unemployment Rate at National Urban level**

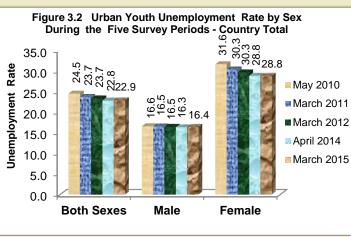

Unemployment rate is computed as the proportion of the unemployed persons to the total economically active population. The March 2015 survey result reveals that unemployed population in urban areas of the country was 1,434,227 with unemployment rate of 16.8 percent. This that about 17 persons unemployed out of 100 economically active persons aged ten years and above. The differentials of unemployment rate by sex show that female unemployment rate (23.8 percent) is more than double as compared to male (10.4 percent).

As shown in Figure 3.1, the total unemployment rate shows a declining trend from 18.9 percent in May 2010 and 17.5 percent in March 2012 to 16.8 percent in March 2015. The comparison of this recent unemployment rate exhibits a decline of 2.1 percentage point during the last five years. As regards by sex, females are more affected by the incidence of unemployment than males. However, the pattern for unemployment trend for female shows a straight downward than their male counterparts.

#### 3.2 Youth Unemployment Rate in Urban Areas

According to the national context, youth comprises those persons aged 15-29 years. The rate of youth unemployment in urban areas was 22.9 percent in March 2015. Female and male youth unemployment rate were 28.8 percent and 16.4 percent, respectively. The overall youth unemployment rates show a declining trend from May 2010 to March 2015. The change of male and female unemployment also shows a decline during the five survey periods. However, female youths are more affected by the problem of unemployment than their male counterparts (see Figure 3.2).

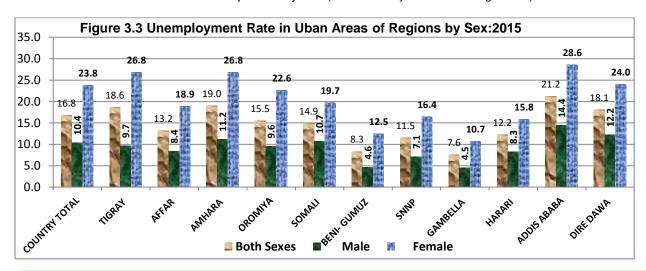

# 3.3 Unemployment and Literacy Status

Throughout the five survey periods, the overall unemployment rate of literate persons is higher than illiterate persons. In summary Table 2 the unemployment rate of literates depicts a declining pattern during the last five survey periods, while similar pattern has been observed for illiterates except the year 2014. Female unemployment rate is significantly higher than male in both literate and illiterate categories.

#### 3.4. Unemployment Rate in Urban Areas of Regions

Regarding unemployment rate by region, the highest rate was observed in Addis Ababa City Administration (21.2 percent) followed by Amhara Region (19.0 percent), while the lowest unemployment rate was recorded in Gambella Region (7.6 percent) and Benishangul-Gumuz Region (8.3 percent) in March 2015. The unemployment rate among female is higher than male in all regions. Unemployment shows a declining trend in Benishangul-Gumuz and Gambella regions, while in the rest of other regions somehow shows fluctuation over the past five years (see Summary Table 1 and Figure 3.3).

### 3.5 Status of Previous Work Experience and Duration of Unemployment

Out of the total urban unemployed persons in the country, 51.4 percent had no work experience and 48.6 percent have had previous work experience prior to the survey date. Among those unemployed persons who had prior work experience, males are higher than females, where as female unemployed are more dominant than male among those without previous work experience. Summary Table 2 also depicts that 49.4 percent of the unemployed persons are jobless for less than 12 months. The unemployed persons who stay without jobs for 96 months and above, accounts 27.8 percent in March 2015.
